PROJECTS

[Data Structure Simulation Visualizer ↗](#)

Feb 2026 - Mar 2026

An interactive web-based visualization tool to help understand and simulate fundamental data structures through animations and step-by-step operations.

This project is designed mainly for students and beginners to visualize how data structures work internally rather than just learning them theoretically.

[Real-time Video Transmission over shared network ↗](#)

Apr 2025 - Jul 2025

Python-based local Wi-Fi video streamer using OpenCV and TCP sockets for low-latency, internet-free transmission

[Elysium - Algae based air purification system for urban and niche environments ↗](#)

Dec 2024 - Nov 2025

Inspired from Serbia's LIQUID3 photobioreactor & algae-based air purifier, adding a few modifications and improvements to make it more efficient and integrating into existing infrastructure to make a non-conventional solution in areas where space is a constraint for integrating into infrastructure, or in places where planting trees is not a feasible solution

[Fund Management System ↗](#)

Apr 2026 - Present

A full-stack fund management application built with Django REST Framework and Next.js for managing financial records, ledger entries, and fund accounts with an intuitive web interface. Features AI-powered receipt extraction using NVIDIA Nemotron and Google Gemini APIs.
